DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 to 25, drawn to a combination of a wearing apparel having a light source, a power source, an electrical circuit connected the light source and the power source, a switch, a housing, a pair of electrical contacts and an electrical conducting member, classified in class 362, subclass 103.
 - II. Claims 25 to 28, drawn to a switch comprising two electrical contacts, electrical conductors and an unrestrained conductive member within an insulating housing to simultaneous contact the contacts to provide movement responsive switch closure, classified in class 200, subclass 52R.
2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed for patentability because the subcombination has separate utility which can be used in other environment such as an audible alarm, a flashlight or an indicator in a vehicle other than a wearing apparel.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classifications, and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
